## SchermNed insect netting filter system

INSECT FILTER

Do you want an affordable, environmentally friendly way to protect your crop from unwanted insects from outside and keep desirable insects inside while creating an optimal climate?

### SchermNed has the solution!

The patented SchermNed Insect Filter offers you better ventilation and air permeability compared to traditional harmonica netting systems.

Our insect filter can easily be used in existing as well as new-build greenhouses. Even with frameless ventilation windows, which is unique. With regard to assembly, this can be done without making adjustments to the ventilation mechanism and while maintaining the maximum window opening. As we do not use any movable components (e.g. cords, weights and springs),

the netting will not be able to get stuck, damaged, or wear out, and therefore not cause problems or hazards because of loose and falling parts. When the ventilation windows open with the insect netting installed, only the netting around the pushers moves up to the glass rods with them.

**In other words, safe and reliable to use for the long term!**

We cover your world because we care

## Advantages

- › Environmentally friendly compared to chemical control
- › No virus transmission or bird damage
- › Suitable for all greenhouse covers and ventilation windows. Even with frameless ventilation windows
- › No adjustments for ventilation mechanism drive
- › Slight reduction in light and ventilation capacity compared to the harmonica netting system
- › Affordable compared to harmonica netting system
- › Easy to clean
- › Quick to assemble, no problem between crop
- › Self-assembly possible  
Incl. assembly instructions
- › Long service life, highly reliable
- › No movable components
- › Various mesh widths possible
- › Very high UV stability, or kilo Langley (Kly)
- › Fast delivery time
